

# Data Visualization Workshop

Presented by Simone Betito

June 2021

👋 Hello!

## Who Am I?

- Product Designer in Data Visualization here in NYC
- MSDV Parsons Grad
- I like to analyze & visualize data related to the environment, social justice issues etc. in my spare time.

# Theme: Using Data Viz to Make Compelling Stories

## Goals:

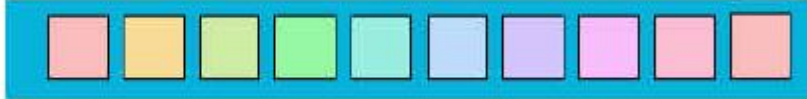

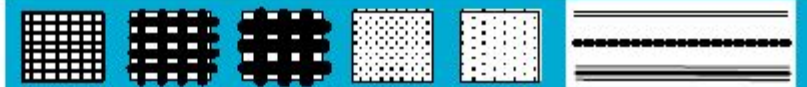

- Get a basic familiarity with Tableau
- Be critical of data provenance
- Learn how to create compelling visualizations through theory

# Agenda

- Objectives of Workshop
- Data Visualization Basics (Chart types, Visual Variables, Accessibility)
- Messy Processes
- Data Storytelling
- Break 🙏
- Data Misinformation & Ethics
- Basics of BI Tools (Measures & Dimensions, Navigating Tableau)
- Data Visualization example using Tableau
- Assignment

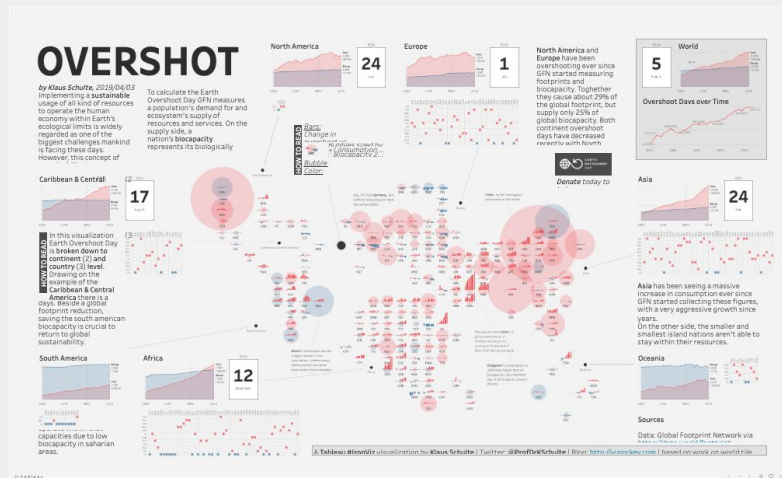

# Visual Variables

(Bertin Variables)

Bertin's Original Visual Variables	
<b>Position</b> changes in the x, y location	
<b>Size</b> change in length, area or repetition	
<b>Shape</b> infinite number of shapes	
<b>Value</b> changes from light to dark	
<b>Colour</b> changes in hue at a given value	
<b>Orientation</b> changes in alignment	
<b>Texture</b> variation in 'grain'	

# Size

- Human perception of size differences
- Changes in length, area or repetition

# Position

- Changes in x, y, (z) location
- Good when precision matters
- Order, length, associative

# Colour

- Changes in hue at a given value
- Difficult for humans to perceive vs position or size
- Colours and categories must be mentally linked, remembered and referred to without confusion.
- Consider Accessibility - colour blindness
- Intuitive Colour palettes (i.e: using blue for bodies of water)

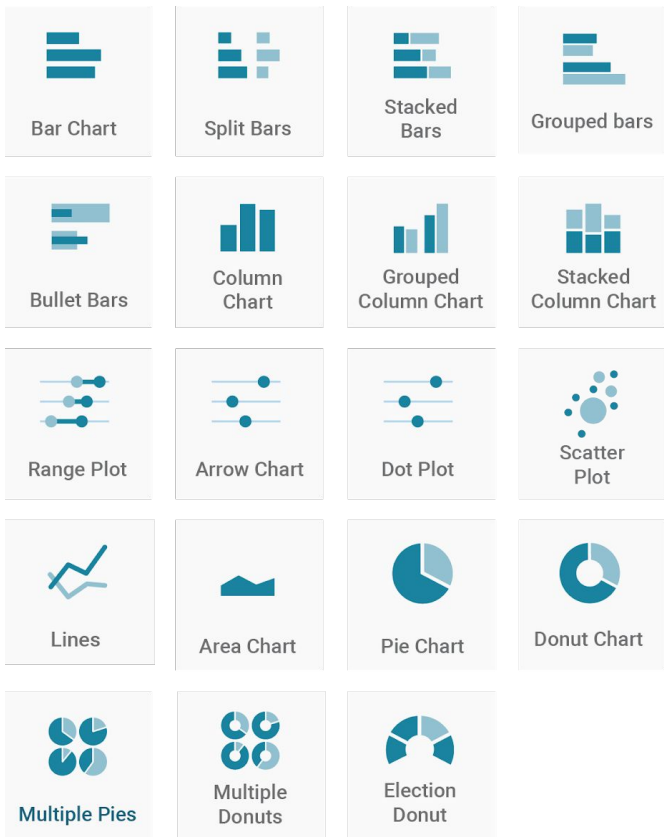

# Types of Charts

# How to choose the right chart?

- No single right way to visualize data
- Iteration
- Rough Guide:
  - **Think about the data you're visualizing**
    - Line charts -> use **continuous** data
    - **SOS** Pie charts **SOS** -> less than 4-5 “slices”
    - No 3D Charts!

# Charts

# Maps

# Tables

## Other Resources for inspo:

Tableau Public Gallery  
Information is Beautiful Awards  
Reddit: Data is Beautiful

### How is the stock market performing?

Which companies are dominating the stock market? This treemap by [Dorian Marulic](#) provides an overview of the stock market by sector and industry. Read Dorian's [story](#) to learn about the process behind creating this viz.

Featured on January 18, 2020

### 1996 - 2006 : Europe Countries Average Height

### How tall are Europeans?

Over time, the average height of people living in European countries has increased. How do the heights of men and women compare? And which country has the tallest people? Explore this visualization by [Dorian Marulic](#).

# Data Viz Accessibility

- Beyond colour blindness
- Employing Takeaway title
- Label data directly
- Type and colour contrast
- Add alt-text

## **Resources:**

[Contrast Checker](#)

[Your Interactive Makes Me Sick](#)

# Building a Viz

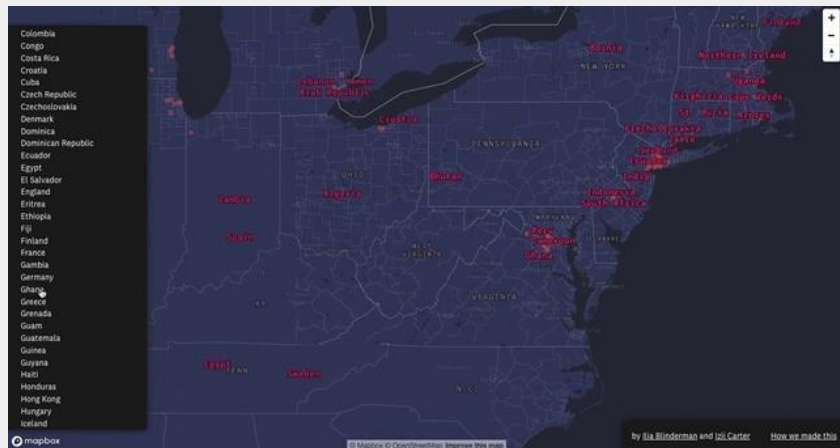

## Aka Messy Processes

# Building a Visualization is Not a Linear Process

# Exploratory vs Explanatory Visualizations

# Data Storytelling

# Data Storytelling

“The interdisciplinary nature of data storytelling is quantitative and poetic, machine and human”

- What is the objective? Call to Action?
- What do you want people to do with the information?
- Do you want people to think differently? Drive Change?

- Impact Behaviour

# Data Storytelling Cont'd

- Know your audience
- Make it about them
- Keep the viz simple
  - Use take-away titles!
  - Fun charts vs basic charts

- Introduce the plot
- Build context for the audience
- Answer "why should I pay attention?"
- Develop "what could be"
  - illustrate with examples
  - include data that demonstrates problem
  - articulate what could happen if no action is taken
- Call to action
- Make it clear what you want your audience to do with the new understanding

## NARRATIVE STRUCTURE

SPOKEN or WRITTEN WORDS (or both) that TELL the STORY in an ORDER that MAKES SENSE and GETS PEOPLE to PAY ATTENTION

# Hans Rosling

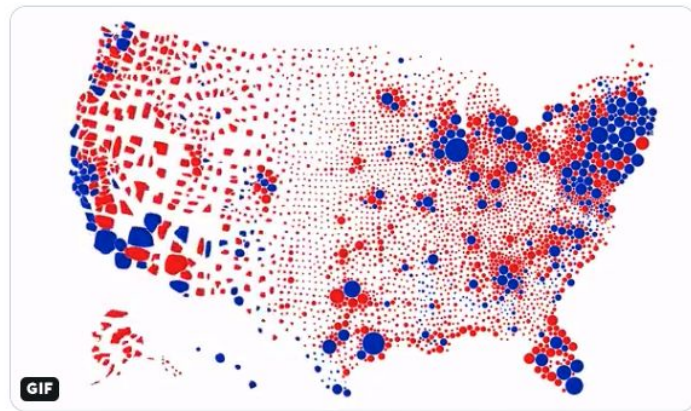

🙏 Break 🙏

# Data Misinformation & Ethics

# Data Quality

- Showing insufficient data
  - Are there nulls?
- Displaying dubious data
  - Are the columns or rows summed?
  - What's the source?
  - How was the data collected?
- Charts that are poorly designed
- Displaying insufficient data
  - What are you deciding to show or hide?

👉 What might be a shady source?

# Data Quality

OUTLIER  
skews average

VARIATION  
the lower average has  
a higher maximum

SMALL SAMPLES  
are more skewed  
by an outlier

AGGREGATION  
reverses pattern

EXTRAPOLATION  
assumes trend

“2.5” children  
per family  
NONEXISTENT  
absurd summaries

# Data Quality

Charts can lie by:

- Displaying the wrong data
- Being badly designed
- Displaying insufficient data
- Suggesting Misleading Patterns
- Concealing or confusing uncertainty

## How Charts Lie

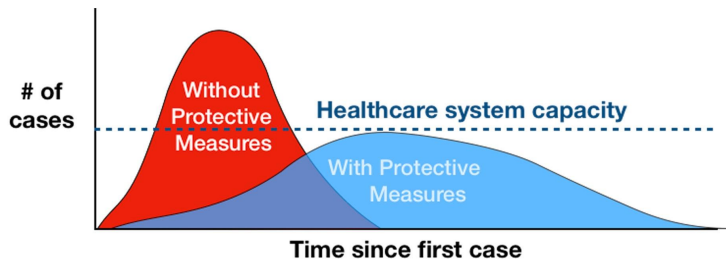

Getting Smarter about  
Visual Information

# Lessons From The Pandemic

- [Data Scientist Rebekah Jones, Facing Arrest, Turns Herself In To Florida Authorities](#)
- [The Spiky Blob Seen Around the World](#)
- Flatten the curve
- [Linear Growth vs Exponential Growth](#)

*Adapted from CDC / The Economist*

# Mona Chalabi - How to Spot A Bad Statistic

# Data is Inherently Biased

- Who is counted and who isn't?
- Cleaning data
- Proximity to community being counted
- Not up to date

👉 Examples of Data bias?

# Algorithmic Bias

- Algorithms learn from biased datasets (who built them, why were they built etc.)
- Facial Recognition Systems used to enhance police powers (recidivism, surveillance, etc.)
- Orgs to Follow: Data For Black Lives, Data & Society, ACLU

# Data Feminism

- Coined by Catherine D'Ignazio & Lauren Klein
- Principles:
  - Examine Power
  - Challenge Power
  - Elevate Emotion and Embodiment
  - Rethink Binaries and Hierarchies
  - Embrace Pluralism
  - Consider Context
  - Make Labour Visible

“Intersectional Feminism examines unequal power. And in our contemporary world, **data is power too**. Because the power of data is wielded unjustly, it must be challenged and changed.”

# Basics of BI Tools

# Qualitative Measures

- Usually a string
- Binary
- Nominal/ordinal
- Examples: Dates & names

## Qualitative

Usually a string

## Qualitative Binary

EXAMPLE  
raining, not raining

## Qualitative Nominal

EXAMPLE  
sunny, cloudy, windy

## Qualitative Ordinal

EXAMPLE  
not windy, very windy

# Quantitative Measures

- Usually a number
- Discrete/continuous
- Example: Profit, height, weight, temperature

## Quantitative

Usually a number

## Quantitative Discrete

EXAMPLE  
2 tornados, 3 tornados

## Quantitative Continuous

EXAMPLE  
70 degrees, 71.4 degrees

# Measures & Dimensions

- Common to have qualitative and quantitative measures named as this in BI tools (SAP, Looker, Tableau)
- Measures = Quantitative or numeric values, usually dependent (y)
- Dimensions are qualitative or categorical variables, usually independent (x)

Measure or Dimension?

# Introduction to Tableau

# Tableau Data Source Page

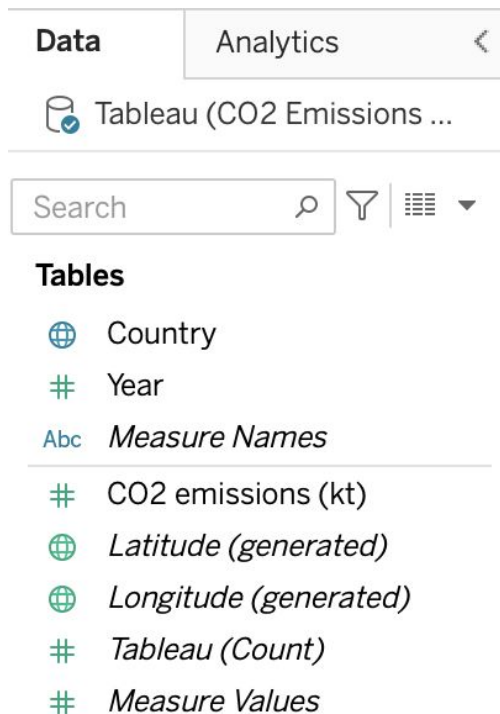

# Tableau Data Source Page

Data Source

# Measures & Dimensions in Tableau

# Assignment

**Create a Visualization in Tableau using given data on Google Sheets or on**

**GitHub** ("DataVizWorkshop\_AssignmentData.csv")

- Make a copy of data in Sheets
- Connect to Tableau
- Choose a story
- Employ a Takeaway Title
- Remove any “chart-junk” (gridlines, unnecessary labels)
- Add a legend and a colour palette
- Use a Readable Font
- Consider Annotations, Tooltips or Labels *if it makes sense*
- Make good use of whitespace
- Seek Feedback

Questions?

# Thank you!
